

■ TEAM VENTUREOS · NVIDIA OPEN HACKATHON

Signal-to-Action Agent

The AI-native Enterprise Revenue Operating System

Signals → Governed Decisions → Human Approval → Revenue Execution → Outcomes

Live ventureos-signal-to-action-agent.vercel.app

A seller owns **200**
accounts.
Overnight, **1,000** signals
changed.
None of them say what to
do.

200 accounts · a dozen signals each · one
human

CRMs record. Dashboards describe. Neither decides.

A red health score tells you what. Never why, what to do, or how sure.

Why?

What action?

What evidence?

How confident?

Copilots hallucinate.

Rec-engines stop at a list.

No governance. No evidence. No approval. No execution. No learning.

Generic copilot

- Fluent and ungoverned
- Invents an account with full confidence
- No cited evidence
- Stamped: unverifiable

Recommendation engine

- Produces a ranked list — then stops
- No human gate
- No execution
- No feedback loop

Not an assistant. Not a dashboard.

An Enterprise Revenue Operating System.

Governed

Explainable

Human-approved

Closed-loop

↳ becoming a voice-native AI Chief of Staff you simply talk to

Live landing experience — 99 accounts · 6 agents · HubSpot test CRM

One governed core. Four separated layers.

Voice Gnani.ai · planned

Reasoning NVIDIA-ready · advisory

Governance source of truth

Execution Revenue Execution Center

Voice → Reasoning → Governance → Execution · firewall enforced

Nine typed agents. One controlled orchestration.

Not a chat loop — a contract-driven workflow.

● Signal Ingestion

● Account Health

● Opportunity

● Governance

● Recommendation

● Communication

● Execution

● Outcome

● Decision Ledger

Planned (hackathon): a spoken question enters the same typed pipeline via Gnani.ai speech.

What changed overnight. Why it matters. What to do.

The leadership altitude — one screen, the whole book, ranked and explained.

Executive mode • AI Chief of Staff brief • Portfolio Pulse (live HubSpot)

The portfolio is **alive**.

Signals drift. Agents react. Recommendations evolve.
Everything is explained — in business language.

Operations altitude • system snapshot • agents engaged

Where the seller **actually** works.

One account. One action. Full cited evidence. One click to approve.

Account Workspace • evidence stack (7 signals) • 91% confidence

Recommendation isn't the finish line. Execution is.

Approve → Execute → Customer Response → Outcome
→ Ledger.

Event-driven execution · Execution Agent → Customer → Outcome

Every decision. Every evidence. **Recorded.**

AI explains. Humans decide. The ledger proves it.

Approval drawer • governance caveat • CRM writeback advisory • outcome capture

Every feature maps to **revenue**.

150 accounts triaged

→ minutes, not days

Churn caught early

→ revenue protected

Expansion surfaced

→ pipeline created, not missed

Faster execution

→ shorter cycle to outcome

Full audit trail

→ governed, deployable risk

Near-zero marginal cost on the deterministic baseline.

Sovereign by design. NVIDIA-ready by configuration.

Four separated layers: Voice (Gnani.ai) · Reasoning (NVIDIA NIM / Nemotron) · Governance · Execution

CURRENT

Provider-abstracted ModelAdapter ·
NVIDIA Nemotron stub wired ·
BYOK

NEAR-TERM

NVIDIA NIM endpoints · self-
hosted, data-resident Nemotron
inference

FUTURE

NeMo Agent Toolkit (agent graph) ·
Triton batch · sovereign on-prem

Pointing reasoning at NVIDIA is a config change, not a rewrite.

Not another CRM, copilot, or dashboard. **An operating system.**

	Dashboard	Copilot	Rec-engine	Signal-to-Action
Evidence	—	—	—	✓
Determinism	—	—	—	✓
Human gate	—	—	—	✓
Execution	—	—	—	✓
Learning loop	—	—	—	✓
Audit trail	—	—	—	✓

Only the operating system that owns the whole governed loop checks every box.

The OS becomes a conversation.

Voice Chief of Staff

— powered by Gnani.ai

Morning brief · portfolio review · deal coaching · meeting prep · governed actions

Enterprise speech · Indian-language + English/regional code-switching · low-latency · governance unchanged

Shipped today. Sequenced ahead.

• LIVE

Every tier preserves one invariant: AI explains and recommends; humans decide and remain accountable.

■

Signal → Action → Outcome.

Governed every step of the way.

Seller-mode workspace, drafts, and timeline

Seller mode • My Book of Business

Email draft • editable, approval-gated

Account timeline • signals, actions, approvals

A1 · Decision Impact Studio (Phase 16B, in review)

Projected-impact what-if: spend -25% / support +3 / renewal 57→21 ripples through agents and the execution plan, logged to the ledger, zero CRM writeback.

A2 · BYOK security posture

Keys in sessionStorage only — never persisted, logged, returned, or deployed. Deterministic fallback always on.

A3 · Evaluation harness

Schema validity · evidence presence · confidence range · caveats · default-pending approval · latency budget.

A4 · Developer Diagnostics (internal)

Ctrl/Cmd+D panel: environment, active API endpoint, backend health, provider, data source — no secrets. Hidden in production.
